

Services:

Deployment > Vendor Management

BuzzBoltMEDIA can provide management of third party vendors involved in your web site, enabling you to have a single point of contact for your projects. For example, in an eCommerce web site, there are different vendors involved that specialize in certain aspects of the process, e.g., the on-line merchant account application, payment processing, shopping cart software, and the security certificate. Dealing with BuzzBoltMEDIA alone, enables you to focus on what your company does best and not on your web site.
