

Services:

Web Development & Testing > Prototyping

Rapid prototyping permits extensive development and testing of the design in a reduced timeframe before a commitment to engineering must be made. BuzzBoltMEDIA.com helps companies shorten their web site development cycle by providing state-of-the-art rapid prototyping services. Prototypes enable you to quickly understand how your web site will work, as well as showing you an initial navigation design and interface.

Prototyping Offers The Following Benefits:

- Decreased product development time
- Potential problems can be addressed before substantial investments in engineering have been made
- Communication between designers and users is promoted
- Prototypes are quick to build and refine, enabling rapid design iterations
- Resource consumption is minimized
- Concrete examples are provided to show decision makers supporting project approval or funding initiatives
- Detailed interface designs can be explored without the costs associated with engineering
- Prototypes can be used for generating more accurate quotes for development costs
- Projects with detailed prototypes launch faster and within budget

Once your organization has confirmed the concept, BuzzBoltMEDIA can produce functional prototypes for testing, marketing, and e-commerce. BuzzBoltMEDIA will work closely with your internal staff to determine your goals and requirements. Deliverables will be defined. An overarching structure and navigational interface will be developed during this process.

This will save your company a significant amount of time and money, and will help you obtain the end results you desire.
